

Ray Files of Bridgelux Vesta 9mm Dim-to-Warm BXRV-DR-1830H-1000-B-1X Products

FTP links to ray files for Bridgelux Dim-to-Warm BXRV-DR-1830H-1000-B-13 Array products can be found in this document. In order to download the ray files, please click on the link.

Note:

- The files are based on testing a single array at a 50°C case temperature and at two different currents: 70mA and 350mA.
- Customers designing on other color SKUs or at other drive or thermal conditions can use these ray files and adjust the LOP level accordingly in their design software.
- All the ray files are generated with 1M rays (IES and EUL format have 10M rays).
- All the rays are generated on a plane at z=0, which is at the center of the top surface of light emitting area. For details about where z=0 is aligned, please refer to the two photos at the end of this file, or read radiant source model in ProSource (under alignment tab).
- Please refer to the 3D CAD files of Dim-to-Warm BXRV-DR-1830H-1000-B-13 from Bridgelux website for mechanical details of the product.
